Agriplast Ginegar Orchard Mulch

Strengthen Orchards with Agriplast Ginegar Orchard Mulch

Agriplast Ginegar Orchard Mulch, a 100-micron LDPE film, is UV-stabilized for long-lasting use, ideal for pomegranate, guava, banana, grapes, and other orchards, enhancing growth and fruit color.

3x

healthier roots with enhanced white root development

2x

better fruit color and quality

4x

reduced labor costs with weed suppression

Agriplast Ginegar Orchard Mulch, available in stock at Agriplast Tech India, is a durable, UV-stabilized LDPE film tailored for orchards like pomegranate, guava, banana, grapes, oranges, and mango. This 100-micron mulch, offered in White-Black and Silver-Black, blocks light transmission to promote white root development and reduce weed-related labor costs. Available in 1.5m and 2m widths and 200m or 300m lengths, it enhances plant growth and fruit color for higher market value. With immediate delivery from Hosur or Ahmedabad, visit www.agriplast.co.in to boost your orchard's productivity and sustainability effortlessly!

Frequently Asked Questions

What is Agriplast Ginegar Orchard Mulch used for?

It is designed for orchards like pomegranate, guava, banana, grapes, oranges, lemon, mango, and litchi to enhance plant growth, conserve water, and reduce weed growth.

How does this mulch help in fruit development?

It helps in better root development, maintains soil moisture, and enhances fruit color, leading to higher-quality yields.

What is the thickness of Agriplast Ginegar Orchard Mulch?

The mulch is 100 microns thick, ensuring long-lasting durability and protection.

Does this mulch allow light transmission?

No, it has zero light transmission, preventing weeds from growing and competing with crops for nutrients.

Is Agriplast Ginegar Orchard Mulch UV stabilized?

Yes, it is UV stabilized, ensuring long-term durability and resistance to harsh sunlight.
