Bluelab[®] Pro Controller Connect

Master Automation with Bluelab[®] Pro Controller Connect

Bluelab[®] Pro Controller Connect automates pH and nutrient dosing with PeriPods, offering remote monitoring, safety lockouts, and a 2-year warranty for precise reservoir management.

4x

more precision with 0.1 pH/EC dosing control

3x

safer with lockouts and alarm features

2x

easier management with remote app access

The Bluelab® Pro Controller Connect, available at Agriplast Tech India, automates pH and nutrient dosing in reservoirs when paired with Bluelab PeriPods. With 0.1 pH/EC precision, safety lockouts, and high/low alarms, it ensures optimal plant conditions 24/7. Monitor and adjust settings remotely via the Connect app and software with the included Connect Stick. Featuring a 2-year warranty, flexible mounting, and auto-resume after power loss, it's in stock for immediate delivery from Hosur or Ahmedabad. Visit www.agriplast.co.in to streamline your nutrient system and grow healthier plants effortlessly today!

Frequently Asked Questions

What does the Bluelab Pro Controller Connect do?

It monitors and automates nutrient and pH dosing in reservoirs by pairing with Bluelab PeriPod dosers, ensuring stable pH and EC levels.

What reservoirs is this controller suitable for?

It is designed for various hydroponic and recirculating systems that require automated nutrient and pH control.

How is this different from the Bluelab pH Controller?

The Pro Controller Connect manages both pH and nutrient dosing (EC) and integrates with multiple PeriPods for multi-part dosing, whereas the pH Controller only automates pH control.

Where is the Bluelab Pro Controller Connect made?

It is designed and assembled in New Zealand from local and imported components.

How does the Bluelab Pro Controller Connect maintain pH and EC levels?

It works with Bluelab PeriPods (sold separately) to precisely dose pH adjusters and nutrients based on preset target levels.

Does it support both pH-up and pH-down adjustments?

Yes, you can configure it to dose either pH-up (alkali) or pH-down (acid) based on your growing system's needs.

Can I control nutrient dosing with this device?

Yes, it allows multi-part nutrient dosing when paired with multiple Bluelab PeriPods and Connect software.

How does it prevent overdosing?

It has built-in safety lockouts, preventing further dosing if parameters are out of range. The dosing routine ensures proper mixing before applying additional doses.

Can I monitor my reservoir remotely?

Yes! When connected to the Bluelab Connect software, you can view real-time data, receive alerts, and adjust settings from your computer or mobile device.

How often should I calibrate the pH probe?

Calibration every 30 days is recommended for accurate readings. Use Bluelab pH 4.0 and 7.0 solutions for calibration.
