

Ginegar Driplock Clear

Optimize Growth in Cold Climates with Ginegar Driplock Clear

Introducing Ginegar Driplock Clear Greenhouse Film, tailored for hilly regions with limited sunlight. With 90% light transmission, anti-drip, and anti-dust properties, it promotes robust plant growth and superior protection. This advanced film ensures optimal conditions for crops, enhancing productivity even in challenging environments. Trust Ginegar to deliver durability and performance for your greenhouse needs in low-light areas.

3X

better light penetration for enhanced plant growth in low-light areas

2X

longer durability with 3-year UV-stabilized protection

30

percent water damage reduction with anti-drip technology

Ginegar Driplock Clear Greenhouse Film, offered by Agriplast Tech India, is a 200-micron, 5-layer, UV-stabilized solution designed for optimal plant growth in cold, hilly regions. With 90% light transmission and 25% diffusion, it ensures better sunlight penetration for floriculture, horticulture, and nurseries (except roses). Its anti-drip feature prevents water condensation damage, while anti-dust properties reduce buildup, enhancing flower growth. Available in widths of 4.5m to 9m and customizable lengths, this durable film offers a 3-year UV life. Visit www.agriplast.co.in to explore how this innovative greenhouse film can boost your crop productivity sustainably.

Manufacturing technology 5-Layer

Thickness	200 Micron
UV Stabilized	Yes
Light Transmission	90%
Light Diffusion	25%
UV Life	3 Years*
Anti Drip	Yes
Anti Dust	Yes
Available Width	4.5m, 5.5m, 7m & 9m
Available Length	600–900m jumbo roll (customizable)
Area recommended	Hilly regions with low winter light
Crops recommended	Carnation, nursery stock (except roses)
Delivery time	Immediate
Port of Dispatch	Hosur / Ahmedabad
*	Pro-rata basis

Frequently Asked Questions

What is Ginegar Driplock Clear Greenhouse Film used for?

It is an innovative greenhouse film designed to provide optimal plant growth, protection, and productivity, especially in hilly areas with limited sunlight.

How much light does Ginegar Driplock Clear transmit and diffuse?

It has 90% light transmission and 25% light diffusion, ensuring better plant growth in cold regions with low sunlight.

What are the key benefits of using Ginegar Driplock Clear?

High light transmission for better photosynthesis, Anti-drip properties to prevent water condensation inside the greenhouse, Anti-dust coating to minimize dust accumulation and maintain efficiency, Enhanced crop growth in cold and low-light areas

What crops is Ginegar Driplock Clear best suited for?

It is recommended for carnation, nurseries (except roses), floriculture, and horticulture in cold regions.

What are the available sizes of Ginegar Driplock Clear?

The film is available in widths of 4.5m, 5.5m, 7m, and 9m, with roll lengths ranging from 600 to 900 meters (jumbo rolls or custom sizes).
