Frequently Asked Questions

What is Anti Drip Clear Film for Nursery?

This is a transparent LDPE plastic film designed to protect early-stage nurseries during the monsoon season by preventing excess moisture buildup.

How does the Anti Drip feature help?

The anti-drip technology reduces water droplet formation on the film's surface, allowing better light penetration and preventing excess humidity-related plant diseases.

What is the thickness and material of this film?

Material: LDPE (Low-Density Polyethylene) Thickness: 120 microns

Is this film UV stabilized?

Yes, the film is UV stabilized, ensuring durability and long-term effectiveness in outdoor nursery applications.

What are the benefits of using this film in nurseries?

Protects young plants from excessive rain and humidity
Maintains optimal light transmission for healthy growth
Reduces disease risk caused by excessive moisture
Helps in early nursery establishment during the monsoon season
