VISION 2030

3RD EDITION

BHARAT 2.0

THE NEW AGE OF INDIAN FARMING

24TH SEPTEMBER 2025

AT
SHERATON GRAND, BENGALURU

About Technology Vision 2030

Technology Vision 2030 is Agriplast's flagship annual conference that brings together the brightest minds shaping the future of Indian agriculture.

The conference serves as a national platform where farmers, agri-startups, technologists, policymakers, investors, and industry leaders converge to exchange ideas, share real-world success stories, and co-create solutions for the next generation of Indian farming.

Through high-impact sessions, networking opportunities, and thought-provoking discussions, Technology Vision 2030 is not just about what's happening today — it's about imagining what's possible tomorrow.

In the 3rd Edition, we are expecting over 600 highly niched participants primarily from India and across the world, giving you exclusive access to a targeted audience to position your brand.

Join us as we shape the next chapter of Indian agriculture.

India's Top Agri-Tech Conference

About The Theme

As India stands at the threshold of a new decade, the call for a second agricultural revolution is louder than ever. “Bharat 2.0 – The New Age of Indian Farming” is not just a theme — it is a declaration of intent.

At Technology Vision 2030, we aim to redefine the narrative around Indian agriculture — from a sector struggling for survival to a sector steering global innovation, sustainability, and self-reliance. This transformation will be mediated by technology, but grounded in Bharat’s traditional wisdom and resourcefulness.

From adopting protected cultivation systems and data-led decision making to embracing climate-smart practices and soilless farming, Indian farmers are evolving into agri-entrepreneurs. Our goal is to create an ecosystem where India not only feeds itself efficiently and sustainably but emerges as a reliable, innovation-driven player on the global agricultural map.

The path to Bharat 2.0 lies in collaboration—between growers and technologists, startups and policymakers, innovators and investors. This year’s conference brings them all under one roof to shape a future where Indian agriculture is profitable, resilient, and globally respected.
